

Magic Warehouse™ - the Precise Solution for your Facility

AS/R's **Magic Warehouse™** is a cost-effective, Windows-based application used to efficiently optimize product picks from Horizontal Carousels and across all warehouse zones.

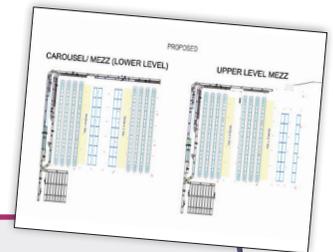

Its user-friendly operation lets operators focus on value-added tasks for getting product out the door accurately and on-time, rather than managing more complicated systems. Completely customizable for the configuration and demands of your facility — **you pay ONLY for the size and features you need!**

Are your warehouse picking challenges Basic, Intermediate or Advanced?

- BASIC:** Magic Warehouse™ offers the best value solution for smaller-scale, carousel-only operations.
- INTERMEDIATE:** Magic Warehouse™ can support potential expansion or increasing complexity due to growth or changes in customer base.
- ADVANCED:** Magic Warehouse™ offers DC-wide integrated solutions that cover every zone including consolidating picks between carousel pods, off carousel picking (shelving, man up order-picker, etc.), conveyors that integrate picks from multiple zones, and large-item storage zones, pallets and racked commodities.

After a thorough diagnostic analysis, AS/R examines logistical functions specific to your company: **PICKING • PACKING/SHIPPING • FACILITY LAYOUT • RECEIVING/PUT-AWAY • REPLENISHMENT • COUNTING**
Then, AS/R recommends a Magic Warehouse™ solution *uniquely designed for your exact needs.*

Some of the many features of Magic Warehouse™

- Batch pick-up up to 24 orders simultaneously
- Automated batch put-away from cart, pallet, or matrix
- Barcode scan confirmation
- Optimal location, size, selection
- Pick-to-light direction on and off carousel
- RF bulk pick
- Priority code picking and selection
- Pass-over scanning: picks & verifies bar code in one quick step!

AS/R Systems provides a variety of economical "best practice methods" such as:

- Carousel-based Batch pick to light or Single line pick
- Lower cost of AS/R Rebuilt™ Carousel Based Pick to light G2P vs. other methods (OPEX, Dematic shuttle, Mini-AS/R)
- Multi zone order management and order consolidation
- Conveyor integration
- Paperless WMS and ERP Host integration
